

HIPAA Transactions: Authorization Management System

Binary Spectrum's solution for an Oncology Center was to migrate, the patient's details from the Practice Management Software and allow the encounter to be recorded on their implementation. This enabled the calculation of the BSA (body surface area) values to generate the dosages for the drug administration. CPT and Diagnosis management was also made available. By importing data from a mixture of sources Binary spectrum implemented faxing of form for each individual IPA in its own distinctive format.
